

Proxi Mobile App

Google AdMob Setup Guide

How to obtain App IDs and Banner Ad Unit IDs from Google AdMob and send them to the Proxi development team.

May 2026

1. AdSense vs AdMob

AdSense = websites. AdMob = Android and iOS apps. Proxi uses AdMob.

Sign in: <https://admob.google.com> | Link AdSense under Payments if you have it.

2. Four values needed from your AdMob account

#	Name	Example format
1	Android App ID	ca-app-pub-XXX~YYY
2	iOS App ID	ca-app-pub-XXX~ZZZ
3	Android Banner Unit	ca-app-pub-XXX/AAA
4	iOS Banner Unit	ca-app-pub-XXX/BBB

App IDs use ~ (tilde). Ad unit IDs use / (slash).

3. Proxi app identifiers (use when registering in AdMob)

Platform	Field in AdMob	Value for Proxi
Android	Package name	com.app.proxiapp
iOS	Bundle ID	com.app.proxiapp

These must match exactly or ads will not load in production.

4. Test IDs in the app today (do NOT use for store release)

Google official sample IDs used during development:

Android App ID:	ca-app-pub-3940256099942544~3347511713
iOS App ID:	ca-app-pub-3940256099942544~1458002511
Android Banner:	ca-app-pub-3940256099942544/6300978111
iOS Banner:	ca-app-pub-3940256099942544/2934735716

5. Step-by-step in AdMob

- A. Create account: admob.google.com > sign in > accept terms > complete payment profile.
- B. Android app: Apps > Add app > Android > name Proxi > package com.app.proxiapp > copy App ID.
- C. iOS app: Apps > Add app > iOS > name Proxi > bundle com.app.proxiapp > copy App ID.
- D. Android banner: open Android app > Ad units > Add > Banner > copy ad unit ID.
- E. iOS banner: open iOS app > Ad units > Add > Banner > copy ad unit ID.

6. Checklist - email completed form to dev team

PROXI ADMOB - CLIENT PROVIDED VALUES

```
-----  
Android package name:      com.app.proxiapp  
iOS bundle ID:            com.app.proxiapp  
  
Android App ID:           ca-app-pub-_____~_____  
iOS App ID:               ca-app-pub-_____~_____  
  
Android Banner Unit ID:   ca-app-pub-_____/_____  
iOS Banner Unit ID:      ca-app-pub-_____/_____  
  
AdMob account email:     _____  
Privacy policy URL:      _____
```

7. How ads work in Proxi

- Small banner at bottom of screens for Freemium users.
- Paid plans (e.g. Elite) do not see ads in production.
- Admin can turn all ads off via backend when API is live (ads_enabled).

8. Backend API (coming soon)

GET /api/v1/settings/ads returns ads_enabled and banner unit IDs.

```
{ "ads_enabled": true,  
  "banner_android_unit_id": "ca-app-pub-.../...",  
  "banner_ios_unit_id": "ca-app-pub-.../..." }
```

9. Before App Store / Play Store release

- Replace test IDs with your real AdMob IDs.
- Privacy policy must mention advertising.
- Complete AdMob payment and tax setup for revenue.

10. Help

AdMob Help Center: <https://support.google.com/admob>
